

# HTML Basics

# What is Frontend?

## 3 Tiers Architecture

Presentation Tier

Frontend

Application Tier

Backend

Data Tier

Database

...As a user, I enter “[www.google.com](http://www.google.com)” in the url address...

# What will happen when we visit an URL?

URL vs IP Address

DNS - Domain Name System : <https://www.cloudflare.com/en-in/learning/dns/what-is-dns/>

**...now the browser received the API address**

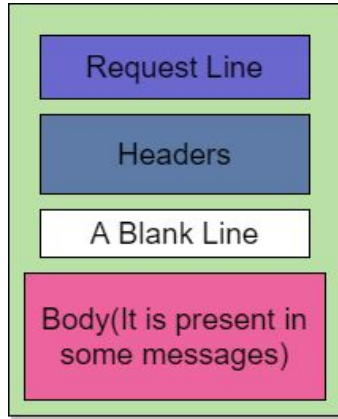

**...**

# What is HTTP?

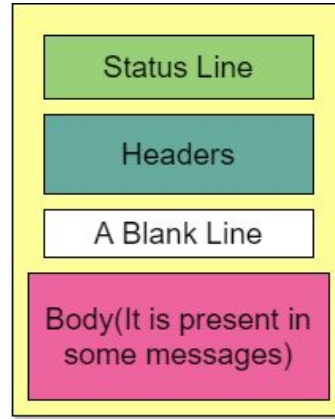

Hyper Text Transfer Protocol

HTTP Request Structure

**Request Message**

HTTP Response Structure

**Response Message**

# HTTP Methods

Get	—	Retrieve Data from server
Post	—	Handle with data / Create new entry
Put	—	Replace the whole data entry
Patch	—	Update part of the data entry
Delete	—	Delete the data entry

Restful API (constraints)- Representational State Transfer  
CRUD - Create/ Read/ Update/ Delete

# Different responses from server

## HTTP Status Code

**100 - 199 :** Information Responses

100 : Continue

**200 - 299:** Successful Responses

200: OK    201: Created

**300 - 399:** Redirection Messages

301: Moved Permanently 301 : Moved Permanently

**400 - 499:** Client Error Responses

400: Bad Request    401:Unauthorized    404: Not Found

**500 - 599:** Server Error Responses

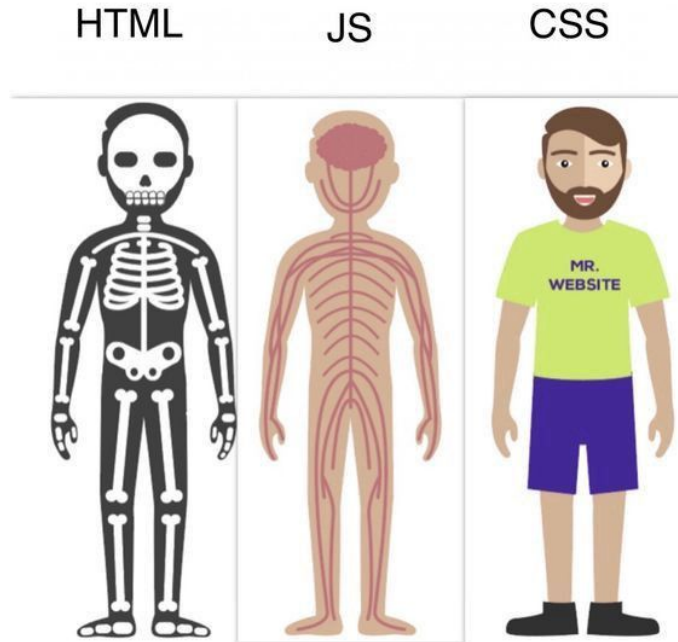

500: Internal Server Error    502: Bad Gateway

**...after browser get response from server,  
now...**

# Relationships among HTML/CSS/JS

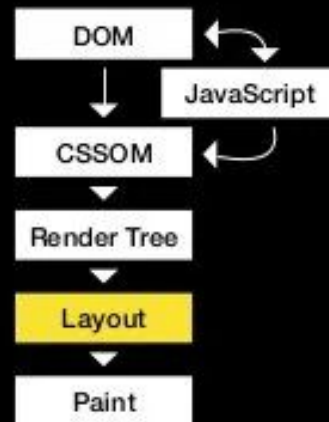

# Browser starts rendering

HTML → DOM (Document Object Model)

CSS → CSSOM (CSS Object Model)

JS → Compiled and manipulate HTML & CSS

## Critical Rendering Path

# Use Chrome Developer Tool

Elements — DOM Tree, Styling

Console — Console.log

Sources — Uglify/Minify Codes

Network — HTTP requests/ Network flow

Application — Storage

Lighthouse — Performance Test

# Local Storage Vs. Session Storage vs. Cookies

	Cookies	Local Storage	Session Storage
Capacity	4 KB	5 MB	5 MB
Expiration	Manually Set	Never	On Tab Close
Accessible server-side	Yes	No	No

**... Now it is time to write a HTML file ...**

# How to create a html file?

HTML —> Hyper Text Markup Language

Extensions: .html

<!DOCTYPE>

<html>

<head>

<meta>

<title>

<link>

<script>

<style>

<body>

# HTML Elements

`<h1>`

`<div>`

`<span>`

`<input>`

`<button>`

`<ul>`

`<li>`

`<br>`

`<strong>`

`<video>`

`<audio>`

`<img>`

`<svg>`

`<canvas>`

`<iframe>`

Self-Closed Tag

# Semantic HTML

A semantic element clearly describes its meaning to both the browser and the developer.

`<article>`

`<aside>`

`<details>`

`<header>`

`<footer>`

`<section>`

`<main> ...`
